Advanced PCIe x8 image acquisition

Building on the field proven technology and performance of Teledyne DALSA’s X64 frame grabbers the new X64 Xcelera Series leverages the PCI Express (PCIe) platform to bring traditional image acquisition and processing technology to new levels of performance and flexibility.

The PCIe host interface is a point-to-point host interface allowing simultaneous image acquisition and transfer without loading the system bus and involving little intervention from the host CPU. Designed with the requirements of the machine vision OEMs in mind, the Xcelera Series will range from entry level frame grabbers, to high-performance image acquisition boards, to embedded vision processors.

Addressing the emerging needs of bandwidth-hungry machine vision applications, Teledyne DALSA’s Xcelera Series is defining next generation frame grabber capabilities with the ability to deliver bandwidth beyond 1GByte/s over multiple-lane PCI Express implementations with room to grow.

The X64 Xcelera-CL+ PX8 Full is a Camera Link frame grabber that is based on the PCI Express x8 interface. Compatible with a Base, Medium or Full Camera Link® camera, the X64 Xcelera-CL+ PX8 Full supports a wide variety of multi-tap area and line scan colour and monochrome cameras. The X64 Xcelera-CL+ PX8 Full board can interface with advanced Camera Link camera output formats including 10-taps of 8-bit/pixel or 8-taps of 10-bit/pixel at 85MHz pixel clock rates.

The X64 Xcelera-CL+ PX8 Full has been built within Teledyne DALSA’s Trigger-to-Image Reliability technology framework. Trigger-to-Image Reliability leverages Teledyne DALSA’s hardware and software innovations to control, monitor and correct the image acquisition process from the time that an external trigger event occurs to the moment the data is sent to the host, providing traceability when errors do occur and permitting recovery from those errors.

Software Support
All of the frame grabbers in the Xcelera series are supported by Teledyne DALSA’s Sapera Vision Software packages:

- **Sapera Essential**, the core development platform, includes over 400 image processing primitive and industrial strength image analysis tools such as pattern finding, 1D and 2D barcode and OCR tools for part identification and detection, color processing tool, separation and measurement applications, blob analysis tool and inspection metrology tool for real-world dimensional measurements.

- **Teledyne DALSA Platform Development Advantage - Free Run-Time Licensing**
  The Sapera Essential standard processing tool run-time license is offered at no additional charge when combined with the Teledyne DALSA frame grabbers. This software run-time license includes access to image processing functions, area-based (normalized correlation based) template matching tool, blob analysis and lens correction tool.

- **Sapera Nitrous** accelerates Sapera Essential applications by providing a seamless support for graphical processing units (GPU) and multi-core CPUs optimization (MCO).

- **Sapera Architect Plus** gives system integrators and industrial vision automation specialists a user-friendly, non-programming graphical environment to quickly prototype and test drive application specific imaging tools within Sapera Essential and Sapera Nitrous.

1 Some conditions and limitations apply, contact Teledyne DALSA sales for details.
### Function | Description
--- | ---
**Board** | Camera Link Specifications Rev 1.2 compatible  
Half length PCI Express 1.1 x8 compliant  
ROHS Compliant

**Acquisition** | Supports one Base, Medium or Full Camera Link area and line scan camera  
Acquisition pixel clock rates from 20MHz to 85MHz

**Resolution** | Horizontal Size (min/max): 16 byte/256K bytes  
Vertical Size (min/max): 1 line/infinite lines for line-scan cameras  
1 line/16million lines/frame for area-scan cameras  
Variable length frame size from 1 to 16 million lines for area-scan cameras  
256MB onboard frame buffer memory  
Integrated advanced tap reversal engine allows independent tap formatting

**Pixel Format and Tap configuration** | Supports Camera Link tap configurations for 8, 10, 12, 14 and 16-bit mono or 8, 10 or 12-bit RGB  
For Base cameras in any of the following combinations:  
3x8-bit/tap, 2x10-bits/tap, 2x12-bit/tap  
1x14-bit/tap, 1x16-bits/tap, & 1x24-bit/RGB  
For Medium cameras - 4x8-bit/tap, 4x10-bits/tap, 4x12-bit/tap  
1x30-bit/RGB, & 1x36-bits/tap  
For Full—8x 8-bit/tap Camera Link; 10-tap/8-bit and 8-tap/10-bit configurations

**Transfers** | Real-time transfers to system memory  
Intelligent Data-Transfer-Engine automatically loads scatter-gather and tap description tables from the host memory without CPU intervention

**On-board Processing** | Bayer Mosaic Filter  
Hardware Bayer Engine supports one Camera Link Base 8, 10 or 12-bit Bayer  
Bayer output format supports 8, 10 or 12-bit RGB/pixel  
Zero host CPU utilization for Bayer conversion  
Shading Correction  
On the fly Flat-line and Flat-field correction with dead-pixel replacement  
Supports Camera Link Base, Medium or Full cameras  
User programmable calibration gain/offset maps  
Output Lookup Tables  
Monochrome  
Each input port has one 256x8-bit, 1024x10-bit, 4096x12-bit OLTUs  
Colour  
Each input port has one 8-bit in/out, 10-bit in 8 or 10-bit out, 12-bit in 12-bit out Lookup table

**Controls** | Comprehensive event notification includes start/end of frame/transfer events  
Camera control signals for external event synchronization  
Optically isolated trigger inputs programmable as active high or low (edge or level trigger)  
TTL Strobe outputs  
PC independent serial communications ports provide support 9600 to 11500 baud  
Appear as system serial ports enabling seamless interface to host applications

**Encoder Inputs** | Web synchronization using TTL/RS422 compatible quadrature (AB) encoder  
Optically isolated input up to 200KHz  
RS422 input up to 5MHz

**On-board GPI/Os** | 4-optically isolated general purpose inputs tolerate 5 and 24VDC signals  
4 general purpose outputs

**Power Output** | PoCl Compliant (4W max)  
Power-on-reset fused +12V output @ 1.5A  
+5V DC output at 1.5A

**Software** | Device driver supports:  
Microsoft Windows XP and Windows 7 (32/64-bit) compatible  
Full support of Teledyne DALSA DIGITAL IMAGING’s Sapera Essential, Sapera LT and Sapera Processing software libraries  
Application development using C++ and .Net languages(C++, C# or Visual Basic)

**System Requirements** | PCI Express Rev 1.1 compliant with one x8 slot system with 1024MB or higher system memory

**Dimensions** | 6.375” (16.1cm) Length X 4.20” (10.7 cm) Height  
10°C (50°F) to 50°C (122°F)  
Relative Humidity: up to 90% (non-condensing)

**Markings** | FCC Class B—Approved  
CE—Approved
